

Handling COVID-19 Patients in Radiology

Reduce patient and healthcare worker access in the department.

Ensure Droplet and Contact Isolation precautions.

Use Personal Protective Equipment (PPEs): Gloves, gown, surgical mask and goggles.

Prefer Portable x-rays and ultrasound to departmental investigations.

Dedicated CT scanner where all protective and decontamination equipment is available.

Appropriate Decontamination of all equipment used and contact surfaces – Use recommended disinfectant concentrations and contact times.

Aggressive Communication and Coordination with clinical teams.
